Janine

Lets start perfoming analysis on the DATA we have and compare it to our preimpact and historical data. Let me know if you have questions.

Gary,

Attached below are background data for both water and sediment pulled from datasets used in previous National Coastal Condition Assessments (there will be another NCCA performed this summer as well). The sediment data are based on data between 2001 and 2005 (I think). Water data are from 2005, post Katrina in MS Sound, so they are not as robust as the sediment data. There is also background data for sediment tox that I'll send next. I haven't had a chance to look at our data in relation to background, but plan to in the near future. OW's focus has been on daily assessments as the data come available and getting it back out ASAP. But I can see a point where they want to know more about site histories and this should come in handy.

Subject: background data

Hi Virginia,

It at all possible, could we get the NCCA background data this afternoon? Our env unit folks downstairs want to look at those data in conjunction with incoming data today.

Thanks so much!
